Power Source

The crane is powered by a 12-volt battery. All power features are controlled with the hand-held remote control. Anti-two-block system is standard on all power extensions.

Cylinder Holding Valves

Safety valves on the lift cylinder and extension cylinder to prevent sudden cylinder collapse in the event of a hose failure.

Rotation System

The large diameter, self-locking, all-steel worm gear rotation mounted on slewing ring crane bearing provides 360-degree continuous power rotation.

Hydraulic System

Self-contained 12-volt hydraulic system supplies 1.6 gpm (6 L/min), powered by high-output extended on-time series wound motor.

Electrical System

The electronic control module is 100 percent solid-state circuit board with no relays, is equipped with arc-suppressing circuitry, and contains the entire signal routing logic as well as the overload protection system circuit. Arc-suppression circuits protect switches and contactors. All high-current contactors (winch motor and pump motor) are industrial grade with heavy bus bars for fast heat dissipation and high temperature contacts to prevent erosion and sticking.

Overload Protection

The automatic overload protection system prevents winch-up, boom extension, and boom-down to protect the operator and crane from overloads. Counterbalance/check valves are used on all cylinders for load control.

Winch

The planetary gear drive winch provides winch speed of 23 fpm (7 m/min) and uses less battery power to operate than worm gear winches. It is equipped with 75' (22.9 m) of 1/4" (6.35 mm) diameter 7 x 19 GAC wire rope. The permanent magnet motor provides immediate stopping both up and down for precise positioning of the load. The winch drum and wire rope pulleys meet ANSI standards for diameter.

Compatible IMT Dominator® Bodies

Dominator DSC20

Dominator DOM I

Dominator DOM II

Dominator DOM II Lo Pro

Control Options

- On/off tethered remote
- On/off radio remote
- Proportional radio remote

NOTES

1. The crane comes complete with 25' (7.6 m) power cable, 150- amp manual reset circuit breaker, 4' frame grounding cable, 25' (7.6 m) remote control pendant, and owner's manual.
2. 1000-CCA battery and 100-amp alternator recommended.
3. Outrigger recommended for most installations.
4. Cranes are shipped assembled and factory-tested.
5. 10,500 lb (4763 kg) minimum GVWR chassis recommended.

Geometric Configuration

Capacity Chart

- Maximum one-part line capacity is 2000 pounds (907 kg). For greater loads use two-part line (boxes denote two-part line).
- Weights of load-handling devices are part of the load lifted and must be deducted from the capacity.
